The prerequisite configurations of the inventions set forth in claims 1 and 4 of the present application are disclosed in document 1 cited in the international search report.

Meanwhile, in the pertinent technical field it is common practice to arrange an air flow rate sensor that has been equipped with an air flow passage and a sensor element so that said air flow rate sensor is inclined relative to the axis of the air intake path in order to accommodate the turbulence of the air within the air flow path and the like, as is disclosed in documents 2 and 3

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

cited in the international search report as well as other prior art documents.

Such being the case, it cannot be found to have been especially difficult to conceive of applying the technical concept in question when configuring the air flow rate sensor that is disclosed in document 1, which is also specified in the prerequisite configurations for the inventions set forth in claims 1 and 4 of the present application.

Meanwhile, the inventions set forth in claims 2 and 3 are not disclosed in any of the documents that are cited in the international search report, and would not have been obvious to a person skilled in the art.
